

Communication Assistant Unified Communications productivity application suite V5

CA - Communication Assistant V5
Unified communication productivity software suite

KEY FEATURES

- Serverless Software application
- Outlook Integration
- Presence based call handling

For over 100 years as a company Panasonic has been developing product solutions to enhance the users experience and life quality. With the Communication Assistant Unified Communications productivity application suite V5, we have built a highly intuitive software suite that converges business telephony together with computer based presence, availability and a variety of collaboration tools. By looking at the way the customers are working we have simplified and enhanced the real-time communications for business telephony users anytime, anywhere, we are giving you the freedom to concentrate on what you do best. Regardless if this is using a softphone application, hardware device or a cordless device.

The Communication Assistant productivity software suite is a highly intuitive unified communications (UC) solution that blends easy point and click telephony together with presence, availability, Microsoft Outlook® integration, visual voice messaging and a variety of collaboration tools to simplify and enhance real-time communications for business telephony users.

With the advantage of server-less operation, Communication Assistant clients can connect directly to the telephone system. Supported on KX-NCP, TDE, NS, NSX and NSV Series models (check each system for full compatibility information).
