MCL VOICE

A revolution in voice-operated technology.

Wave goodbye to time-consuming paperwork and sub-standard voice recognition technology.

MCL Voice is a high-performance voice recognition platform perfect for use as the primary data capture method. Operational even in noisy industrial environments, it delivers significant improvements in productivity, accuracy and efficiency.

Voice technology has become the new standard for order picking. Used in conjunction with MCL Mobility Platform, MCL Voice can be used across your entire mobile workforce – from retail-in-store inventory taking, to voice-assisted repair tasks in the field.

Why MCL Voice?

- Moving to voice operation frees workers' hands to handle requested items, eliminating the manual need to key in data.
- No lengthy voice system training required.

- Allows voice operators with strong accents and individual pronunciation to use the application in a natural way.
- Replaces problematic words for foreign workers speaking in a different local language.
- Perform voice recognition and speech synthesis directly on the mobile computer – no server or network resources required.
- Combine your MCL Voice with barcode scanning, keyboard, touchscreen and RFID technologies for best-fitting ergonomics and operational efficiency.
- Increase your ROI by running multiple applications on the same device. Combined with MCL's Mobility Platform, you can easily manage your device estate and the applications installed from a central web-based portal application.
- Multilingual support available in more than 25 different languages.
- Voice picking delivers extensive productivity gains when switching from paper-based solutions, and minimises accuracy errors.

A SEAMLESS INTEGRATION

Let Panasonic's experts take care of your app deployment

Don't have the capacity to develop your app in-house? Panasonic offers custom app development and deployment using the MCL development environment as an add-on service. Any apps developed for the MCL Platform can be run on multiple device types running different operating systems.

Panasonic can offer consultation with application development, provide ideas on how to improve your daily business functions and provide regular milestone updates throughout your custom application creation.

Not only can Panasonic create your application, we can also install it on your devices via our state-of-the-art configuration centre. This will allow you to receive your device fully configured, eliminating downtime and giving the end user a complete out-of-the-box experience. Alternatively this can be managed at the customer site using the MCL Mobility Platform.
